

Station Two

4.52MW OF CLEAN, RENEWABLE & RELOCATABLE GENERATING STATION AVAILABLE FOR SALE

WITH 17 YEAR GOVERNMENT ACCREDITATION

Ofgem's Renewables obligation (RO) requires UK electricity suppliers to source an increasing proportion of electricity from renewable sources. This obligation can be met either by presenting Renewables Obligation Certificates (ROCs) or by paying into a 'buy out' fund. Operators of eligible renewable generating stations (i.e. those which meet Ofgem's ROC issuance requirements) are able to obtain ROC accreditation for the renewable electricity they produce. They are then paid by Ofgem for generating ROCs, which provides significant additional income outside customer payments for electricity and (potentially) heat.

ROC accreditation with Ofgem is on the basis that the generating station is relocatable, and powered by renewable fuel.

The generating station can be relocated anywhere in the UK during the period of the 20 year ROC (started 31st March 2017) and can be relocated multiple times over this period.

Package List

Manufacturer	Size (kVA)
Perkins	1700
Caterpillar	1700
Mitsubishi	1425
MTU	825
